AD30 TRANSPONDER COIL DETECTOR

The AD30 Transponder Coil Detector has been designed to assist with the diagnosis of all Immobiliser systems using transponder technology.

One of the critical components of an immobiliser system is the coil or antenna fitted around the ignition barrel.

When diagnosing problems with the immobiliser system, there is always the question of "is the immobiliser antenna transmitting a correct signal to power the key transponder".....Now by using the AD30 this question can be quickly and easily answered, saving valuable time and money.

The AD30 is placed near the ignition barrel in the steering column and provides a visual and audible indication of antenna power. Additionally on certain vehicles, by switching the ignition on, a further indication of a transponder signal being sent by the ignition key and received by the antenna can also be provided.

If you already have Advanced Diagnostics Key Programming equipment the AD30 is an essential addition to your tool kit that will earn its keep within a few jobs.

FEATURES

- User friendly & portable
- Powered by PP3/9v battery
- LED power on indication
- Led antenna/transponder indication (certain models)
- Audible antenna/transponder indication (certain models)
- Auto power off function
- Can be used on all makes of vehicles
- Tests all types of coils/antennas
- Tests all types of fixed/rolling code transponders
